

Features of Project:

1. customer.csv

The **features (columns)** in **customer.csv** describe customer information and contact details.

Here's an easy explanation:

- **Customer_ID** → Unique ID for each customer
Example: C001, C002
- **Name** → Name of the customer
Example: Tara Krishnan
- **City** → City where the customer lives
Example: Panchkula, Kolkata
- **Contact_Number** → Customer's phone number
Used for communication and delivery updates
- **Email** → Customer's email address
Used for notifications and order details
- **Gender** → Gender of the customer
Example: Male, Female
- **Address** → Full address of the customer
Used for product delivery

Example:

Customer_ID	Name	City	Gender
C001	Tara Krishnan	Panchkula	Female

This means:

- Customer ID = C001
- Customer name = Tara Krishnan
- Customer lives in Panchkula
- Gender = Female

These features help analyze:

- Customer locations

- Customer demographics
- City-wise sales
- Delivery locations
- Customer contact information
- Customer behavior patterns

2. products.csv

The **features (columns)** in products.csv describe the details of each product sold by Ferns and Petals.

Here's an easy explanation:

- **Product_ID** → Unique ID for each product
Example: 1, 2, 3
- **Product_Name** → Name of the product
Example: Magnam Set, Voluptas Box
- **Category** → Type/category of the product
Example:
 - Cake
 - Soft Toys
 - Plants
 - Sweets
 - Colors
 - Mugs
- **Price (INR)** → Price of the product in Indian Rupees
Example: 1935 means ₹1935
- **Occasion** → Occasion for which the product is suitable
Example:
 - Birthday
 - Anniversary
 - Diwali
 - Holi
 - Valentine's Day

- Raksha Bandhan
- All Occasions
- **Description** → Short details about the product
Used to explain or describe the product

Example:

Product_Name	Category	Price	Occasion
Sed Pack	Cake	1492	Valentine's Day

This means:

- Product name = Sed Pack
- Product category = Cake
- Price = ₹1492
- Suitable for = Valentine's Day

These features help analyze:

- Top-selling products
- Product categories
- Occasion-wise product demand
- Product pricing
- Revenue generation
- Product popularity

3. orders.csv

The **features (columns)** in orders.csv explain each order placed by customers.

Here's an easy explanation of the columns:

- **Order_ID** → Unique number for each order
Example: 101, 102
- **Customer_ID** → Identifies which customer placed the order
Example: C001, C045
- **Product_ID** → Identifies which product was ordered
Example: P12, P45

- **Quantity** → Number of items ordered
Example: 2 means customer ordered 2 products
- **Order_Date** → Date when the order was placed
Example: 05-03-2023
- **Order_Time** → Time when the order was placed
Example: 10:45 AM
- **Delivery_Date** → Date when the order was delivered
Example: 08-03-2023
- **Delivery_Time** → Time when the product was delivered
Example: 06:30 PM
- **Location** → City/location where the order was delivered
Example: Jaipur, Delhi
- **Occasion** → Occasion for which the gift was ordered
Example:
 - Birthday
 - Anniversary
 - Diwali
 - Holi
 - Valentine's Day
- **Month** → Month extracted from Order_Date for monthly analysis
Example: January, February
- **Order_Hour** → Hour extracted from Order_Time
Helps identify peak ordering times
- **Delivery_Days** → Number of days taken to deliver the order
Example: 3 means delivery took 3 days
- **Delivery_Hour** → Hour extracted from Delivery_Time
Helps analyze delivery timing
- **Price** → Price of the product
Example: ₹1500

These features help analyze:

- Sales trends
- Customer behavior

- Delivery performance
- Monthly revenue
- Occasion-based sales
- Peak ordering hours
